

Recycling room user instructions

Effective recycling starts with sorting at home. This is why we recommend taking the waste types collected using the pipeline-based system into consideration at their source and planning waste sorting at home in a way that suits you. The pipeline-based waste collection system is used to collect mixed waste, biowaste, cardboard and paper. Other recyclable waste must be taken to a recycling room.

GLASS

METAL

**LARGE
CARDBOARD ITEMS**

**LARGE MIXED
WASTE ITEMS**

Glass bottles and jars
